# Choosing LED colour temperature and colour rendering for UAE interiors

## Let the finishes decide

In a Dubai boutique, two nominally 3000 K spotlights can make the same burgundy fabric look different because their spectral output differs.

[AI IMAGE PROMPT: Photorealistic architectural rendering of two pools of warm white light on identical burgundy silk and brushed bronze swatches, luxury modern interior in Dubai, warm 3000K accent lighting, cinematic lighting, 8k resolution, Unreal Engine 5 render style --ar 16:9]

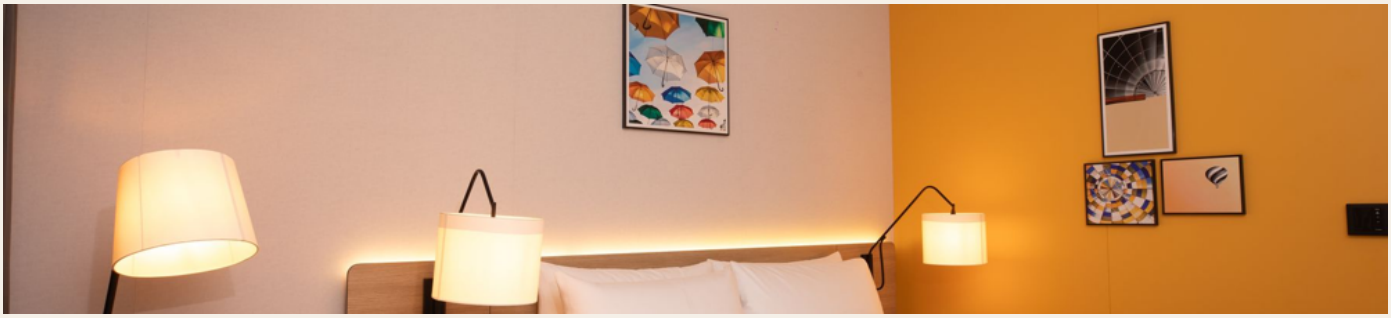

Use correlated colour temperature to shortlist the appearance of white light, then ask for colour-rendering data at the exact output and CCT offered.

[AI IMAGE PROMPT: Photorealistic architectural rendering of interior architect comparing a warm-white source and a neutral-white source on white porcelain, luxury modern interior in Dubai, warm 3000K accent lighting, cinematic lighting, 8k resolution, Unreal Engine 5 render style --ar 16:9]

For skin tones, timber and saturated reds, examine the supplier’s R9 and TM-30 information alongside the general CRI figure and verify the effect on real samples.

[AI IMAGE PROMPT: Photorealistic architectural rendering of oak veneer, terracotta leather and a hand under a high quality retail spotlight, luxury modern interior in Dubai, warm 3000K accent lighting, cinematic lighting, 8k resolution, Unreal Engine 5 render style --ar 16:9]

## Specify colour across adjacent fittings

On a long Abu Dhabi hotel corridor, request chromaticity consistency in SDCM steps for the selected LED package and inspect adjacent wall scallops for visible tint shifts.

[AI IMAGE PROMPT: Photorealistic architectural rendering of repeated downlight scallops on a continuous ivory plaster corridor wall, luxury modern interior in Dubai, warm 3000K accent lighting, cinematic lighting, 8k resolution, Unreal Engine 5 render style --ar 16:9]

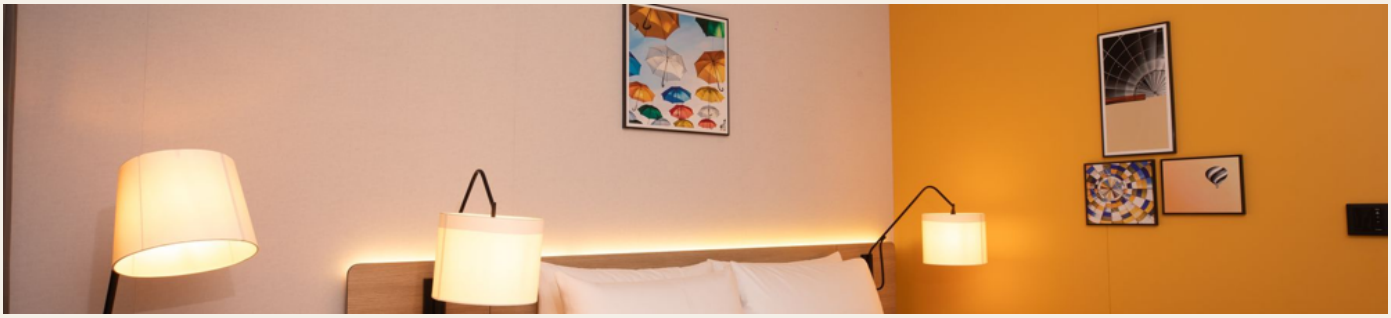

A fixed-white engine keeps one nominal CCT through dimming, while a dim-to-warm engine follows a product-specific curve that can bring amber tones into a dining scene.

[AI IMAGE PROMPT: Photorealistic architectural rendering of two dining table mock-ups at low intensity with fixed-white and amber dim-to-warm pendants, luxury modern interior in Dubai, warm 3000K accent lighting, cinematic lighting, 8k resolution, Unreal Engine 5 render style --ar 16:9]

Tunable-white gear gives the operator a separate colour adjustment, so record both output and CCT for each scene the owner will recall.

[AI IMAGE PROMPT: Photorealistic architectural rendering of twilight villa dining room with a two-channel wall control and cool daylight beyond, luxury modern interior in Dubai, warm 3000K accent lighting, cinematic lighting, 8k resolution, Unreal Engine 5 render style --ar 16:9]

## Set an acceptance sample

Compare candidate fittings at matched illuminance on the same stone slab so extra brightness does not win the colour decision.

[AI IMAGE PROMPT: Photorealistic architectural rendering of two sample luminaires over a single travertine slab with a light meter between them, luxury modern interior in Dubai, warm 3000K accent lighting, cinematic lighting, 8k resolution, Unreal Engine 5 render style --ar 16:9]

Retain the approved sample, driver setting and finish board for the contractor to compare with subsequent batches and future replacements.

[AI IMAGE PROMPT: Photorealistic architectural rendering of archived luminaire sample in a case beside a numbered fabric and stone finish board, luxury modern interior in Dubai, warm 3000K accent lighting, cinematic lighting, 8k resolution, Unreal Engine 5 render style --ar 16:9]
